

### Hydrauliek adapters

De adapter vormt het verbindingsstuk tussen het aan te sluiten component en de hydraulische leiding.

Adapters maken het mogelijk een verantwoorde overgang te maken tussen verschillende aansluitvormen en draadsoorten. Daarnaast kan een adapter verschillen in leidingdoorlaat binnen een systeem overbruggen.

"Knie" adapters kunnen nuttig zijn bij het inbouwen van slangen in kleine ruimtes of om extreme buigingen in slangen te voorkomen. (Zie montage slangassemblages in het hoofdstuk slangassemblages)

Met "T"-adapters en "kruis" adapters kunnen leidingen gesplitst of samengevoegd worden.

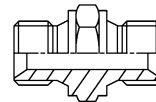

Een adapter is altijd een schakel in het hydrauliek systeem. Daarom moet bij de selectie altijd nagegaan worden of de drukbestendigheid en doorlaat voldoende zijn.

Daar in het Fluiconnecto adapterprogramma een veelheid van maten, draadsoorten en afdichtingsvormen gecombineerd worden, is het onmogelijk een algemeen geldend overzicht van werkdrukken van adapters te geven. De verkoopafdeling van Fluiconnecto kan u hierover advies geven.

Fluiconnecto heeft een uitgebreid programma roestvrijstalen adapters.
